

After several years in the ground, the bottom section of your mailbox post will eventually rot and break off. You can either replace it with a post from Otto's Streetscapes or splice in a new bottom section illustrated in this image. You will need a short section of a 4 X 4 inch treated post found at any home center and two six inch bolts with washers and nuts. It is advisable to paint the new section before installation. The approved paint is provided by the HOA. To obtain paint, send an email to contact@turfwaypark.org - include your phone number and best time to call.
